Title LED Trailer lighting

Last Modified 06-MAY-2008 10:12

Category Electrical

Symptom 203000 Basic Electrical

Please note that as yet Land Rover vehicles with bulb failure monitoring systems for trailer light failure sensing are not compatible with trailer light boards that have LED based illumination. As a result of this the LED lighting on the trailer board may flicker during the sensing function. (This issues will also present itself if fitting LED rear light clusters available in the aftermarket(Non-Land Rover approved Accessory)

Content

Based upon this we recommend that trailer light boards with standard incandescent bulbs only are fitted.

Land Rover are working towards making the bulb check function compatible with LED trailer light boards and an announcement will be made on this in line with 10MY vehicles.
