While every effort is made to ensure accuracy, design changes to the vehicle may be made in the period between the completion of this publication and the introduction of vehicles. All rights reserved. No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form, electronic, mechanical, recording or other means without prior written permission from Land Rover.

USING THIS PUBLICATION

HEALTH AND SAFETY

Always follow health and safety guidelines, specifically the Electrical Precautions detailed in the Workshop Manual.

Important

The information provided in this publication is for use only by competent, qualified auto-electricians. Good product knowledge is assumed, as well as the ability to access and use recommended test equipment and other reference material provided.

Test equipment and other reference material

The information in this publication should be used in conjunction with the recommended test equipment; refer to Workshop Manual. Other reference material includes: Electrical Circuit Diagrams, Technical Service Bulletins (TSB) and the Workshop Manual.

Battery disconnection and reconnection

It is imperative that any information relating to battery disconnection and reconnection is followed; refer to the appropriate sections in the Workshop Manual.

Fault diagnosis

Always use the recommended test equipment and test procedures for correct and reliable fault diagnosis; refer to the appropriate sections in the Workshop Manual.

NOTE: Before starting electrical checks on the vehicle, ensure that relevant mechanical functions operate satisfactorily; refer to the appropriate section of the Workshop Manual.

Abbreviations and acronyms

Abbreviation	Description
APP	Accelerator pedal position
ABS	Anti-lock braking system
ACCM	Auxiliary climate control module
AFS	Adaptive front lighting system
A	Ampere
ATCM	Automatic temperature control module
AVI	Audio video input
BBUS	Battery backed-up sounder
BJB	Battery junction box
CAN	Controller area network
cav	Cavity
CBC	Corner brake control

Cct	Circuit
col	Colour
CSA	Cross sectional area
CJB	Central junction box
CLS	Central locking system
CO	Carbon monoxide
D	Drive
DAR	Drive away release
Destn	Destination
DC	Direct current
DSC	Dynamic stability control
DTC	Diagnostic trouble code
EBA	Emergency brake assist
EBD	Electronic brake-force distribution
ECM	Engine control module
ECT	Engine coolant temperature
ECU	Electronic control unit
EDC	Engine drag-torque control
EMS	Engine management system
ETC	Electronic traction control
FET	Field effect transistor
FFBH	Fuel fired booster heater
HDC	Hill descent control
HLD	High level definition
IHU	Integrated head unit
in	Inches
kHz	Kilohertz
km/h	Kilometers per hour
LCD	Liquid crystal display
LED	Light emitting diode
LF	Low frequency
LH	Left hand
LHD	Left hand drive
LIN	Local interconnect network
MIL	Malfunction indicator lamp
mm	Millimeters
MOST	Media orientated system transport
mph	Miles per hour
ms	Milliseconds
M/S	Manual/sport

	Neutral
NAS	North American specification
NOx	Nitrogen oxide
NTC	Negative temperature co-efficient
P	Park
PWM	Pulse width modulation
R	Reverse
RF	Radio frequency
RH	Right hand
RHD	Right hand drive
RSC	Roll stability control
SDARS	Satellite digital audio radio service
SPE	Single point entry
SRS	Supplemental restraint system
TCM	Transmission control module
TMC	Traffic message channel
TPMS	Tire pressure monitoring system
TV	Television
UK	United Kingdom
V	Volt
VICS	Vehicle information and communication system

Wire colour codes

The following list contains wire colour codes used on the vehicle harnesses.

Code	Colour
BK or B	Black
GN or G	Green
PK or K	Pink
LG	Light green
BN or N	Brown
OG or O	Orange
VT or P	Purple
RD or R	Red
GY or S	Grey (Slate)
T	Transparent
BU or U	Blue
WH or W	White
YE or Y	Yellow

Connector number suffix

To provide more accurate connector information, in some instances, a suffix has been added to the connector that identifies the vehicle harness derivative; refer to the Connector number suffix table below.

Note: The suffix does not always appear on the circuit. Take care to use the correct circuits appropriate to the vehicle under scrutiny.

Connector number suffix table

Code	Derivative	Detail
A	PV6	Gasoline V6
B	PV8NA	Gasoline V8 naturally aspirated
C	DV6 or DV6EU3	Diesel V6 (EU3 compliant)
D	PV8SC	Gasoline V8 super charged
E	DV8	Diesel V8
F	D4	Diesel (in-line 4)
G	D6	Diesel (in-line 6)
H	DV6EU4L	Diesel V6 (EU4 compliant, left-hand drive)
J	DV6EU4R	Diesel V6 (EU4 compliant, right-hand drive)
K	DV8R	Diesel V8 (right-hand drive)
L	LHD	Left-hand drive
P	PETROL	Gasoline
Q	DIESEL	Diesel
R	RHD	Right-hand drive

Connector details

A page is dedicated to each connector, with the information presented in a standard format. Connector information comprises:

- **Connector Number** – The assigned number, prefixed 'C'.
- **Description** – Usually derived from the component to which the connection is made.
- **Location** – Used in conjunction with the photograph to determine the location of the connector.

Note: References to the LH or RH side given in this document are made when viewing the vehicle from the rear.

- **Photograph** – Shows the location of the subject connector. In most cases the photograph will indicate the amount of trim removal necessary to reveal the connector. For convenience, some photographs identify more than one connector.
- **Face View** – An outline of the connector housing, viewed from the front, showing pin numbers (if applicable).
- **Part No.** – The part number as it appears on the harness drawing (if applicable).
- **Colour** – If applicable, the colour of the connector housing is shown. NATURAL is used to describe connectors with a clear/translucent plastic finish.
- **Gender** – If applicable, identifies the gender of the connector pins (NOT the housing) as Male or Female. Generally, connectors mating directly into a component have Female pins.
- **Type** – Generic connector group.
- **No. of Ways** – Identifies the number of cavities within the connector.
- **Service Repair Kits (where applicable)** – Gives details of all harness repair kits applicable to the connector. If a connector has different types of cavity, more than one service repair kit will be required.

- **Wire Chart (Pin-out table)** – A six column table, giving details of each wire within the connector:

1. **Cav:** The connector pin (cavity) number.

NOTE: Wires may not be fitted to all cavities.

2. **Terminal:** Part number of the pin.

NOTE: Some wires do not have terminals, for example: antennae.

3. **CSA:** The cross sectional area of the wire in mm².

4. **Col:** The colour of wire populating the connector pin.

5. **Cct:** Identifies the model or option which uses the wire. 'ALL' means applicable to all models in the range fitted with the feature or system in question. In instances where different models, features or systems require different colour wires to be fitted in a cavity, each instance of the cavity is included in the pin-out table.

6. **Destn:** The destination of the wire.

Sample wire chart – 6 pin connector

Cav	Terminal	CSA	Col	Cct	Destn
1	AFU3728	4.50	N	2	C0571-3
1	AFU3728	4.50	N	6	C0571-5
2	AFU3725	3.00	NW	6	C0588-6
2	AFU3725	3.00	NW	2	C0588-2

6	AFU3725	2.50	SU	2	C0588-3

HARNESS REPAIRS

Introduction

CAUTION: The harness must be replaced when the damage is attributed to excessive current flow or where there is evidence of over-heating.

Never attempt to repair the following:

- Any connector terminal.
- Any Media Orientated System Transport (MOST) network harnesses.
- Supplemental Restraint System (SRS) firing circuits.
- Link lead assemblies, which are unique to safety critical areas such as ABS and thermocouple circuits; a typical example is the ABS wheel speed sensor with moulded connector.
- Any wires with a cross sectional area (CSA) greater than 6.0mm.
- Screened cables and leads.

If damage occurs to any of the above areas, an overlay harness must be used. These are available through the normal parts ordering process.

Repair Kit

- Crimping tool.
- Wire cutter/stripper.
- Heat-shrink sleeving.
- Wire colour identification rings.
- Splice connectors.
- Pre-terminated leads (connector pins with 90mm wire 'pig tails').
- Connector housings.
- Connector pin extractor tools.

In order to carry out a repair, a suitable hot-air gun and heat resistant blanket will also be required (these can be sourced locally).

Part Harnesses

In addition to the items included in the harness repair kits, part harnesses are also available to effect repairs on the vehicle. These part harnesses can be viewed via 'Microcat' and are available through the normal parts ordering process.

Repair Guidelines

The Harness Repair Kit includes an illustrated instruction booklet, however the following additional repair guidelines must be followed:

Twisted Pairs

Twisted pairs of wires (CAN bus, ABS wiring, etc.) can be repaired as required. When repairing a twisted pair of wires do not unwind the existing wires any more than necessary. Before completing the repair, replicate as closely as possible the original twisting pattern on any new wiring.

Splice Connectors

It is undesirable to make more than five repair joints on the wiring to any harness connector, where more repairs are required at the same connector, the harness should be replaced.

Whenever a repair is required, the position of the splice connectors must be staggered. This keeps the bulk of the repaired area to a minimum, ensuring all trim can be refitted correctly after the repair has been effected.

Replacement Connectors

If a connector is damaged and needs replacing, use the tools contained in the Harness Repair Kit to relocate the wires into the replacement connector. Only relocate one wire at a time, ensuring it is fitted to the correct cavity in the new connector.

Gold Connector Pins

A number of vehicle connectors are fitted with gold plated pins. Do not replace gold connector pins with tin connector pins as this will lead to early failure of the electrical contact.

Repair Methods

CAUTION: Before commencing a repair, disconnect the vehicle battery and wait one minute to allow the SRS and Satellite Navigation systems time to de-energise.

The following process should be used when carrying out a repair:

NOTE: Before commencing a repair, refer to the appropriate 'Service Repair Kit' table (see example in Table 1 below) for details of the correct tools and replacement components. The 'Service Repair Kit' table (where appropriate) can be found beneath the 'Connector Details' in the Electrical Reference Library (ERL).

YPL101910	0.75 CSA	
Cavities 1-9, 11-15		
VDK500010	Instruction, repair kit	1
VDK500070	Instruction, extract tool	1
VDK500080	Instruction, extract tool	1
YMI000870	Pre-terminated lead	1
YPQ000100	Identification rings (small)	1
YRV000040	Splice (red, CSA; 0.25-1.6)	1
YRW000390	Wire cutter/stripper	1
YRW500010	Applicator	1
YRW500060	Extract tool	1
YRW500070	Extract tool	1

The following process should be used when carrying out a repair:

1. Using the wire cutter/stripper, cut the wire to be repaired and strip the required amount of insulation from the wire.
2. Slide an appropriately sized heat shrink sleeve over the bare end wire for later use.
3. Remove the damaged connector pin from the connector housing using the appropriate extraction tools.
4. Select the correct connector pin, pre-terminated lead and fit the appropriate wire colour identification rings.
5. Select the correct size of splice connector from the kit.

CAUTION: The crimping tool jaws perform two different crimps simultaneously: one crimps the wire insulation; one crimps the bare wire. Ensure the splice connector is placed correctly in the tool or the wire will be insufficiently crimped and a poor electrical contact may result.

6. The crimping tool contains three sets of jaws. The jaw colours correspond to the splice connector

- colour. Select the correct jaw and crimp the splice connector to the harness bare-end wire.
7. Using the tool, crimp the pre-terminated lead to the splice connector.

CAUTION: Place the heat resistant blanket in a suitable position to avoid heat damage to adjacent components and trim.

CAUTION: Do not overheat the repair as degradation and subsequent failure of the connection may result.

8. Slide the previously fitted heat shrink sleeve into position over the splice connector. Using the hot-air gun to the manufacturer's guidelines, apply heat evenly to the heat shrink sleeve until it is tightly shrunk around the splice connector.
9. Connect the repaired wire to the connector housing.
10. Repeat steps 1 to 9 for any further damaged wires.

FIBRE OPTICS

General

The fibre optic system installed uses Media Oriented Systems Transport (MOST), which is a multimedia network, optimized for automotive applications. Its design allows it to provide a low-overhead and low-cost interface for the simplest of devices, such as microphones and speakers. More intelligent devices can automatically determine the features and functions provided by all other devices on the network and establish sophisticated control mechanisms without distracting the driver.

Under normal installation conditions the system is robust and failures should not occur. However, since the optical fibres convey data using infra-red light, it is vital the passage of light down the fibre is unobstructed. Obstruction of infra-red light can be caused by:

- Contamination of the fibre ends.
- Damage to the fibre ends.
- Bending, kinking or damaging the cable.

NOTE: Fibres damaged by kinking or exposure of the optical core due to abrasion must be replaced.

Handling

Take special care to avoid damage or contamination when handling or working in the vicinity of fibre optic cables and connectors.

NOTE: Damage or contamination includes scratches to the cable ends and pollution caused by dust, dirt, oil or moisture.

CAUTION: When handling fibre optic cables cleanliness is of paramount importance. The fibre ends should not be touched even with clean bare hands as the natural oils deposited from the skin may penetrate the fibre or may cause dirt to adhere to the fibre end.

System malfunctions and unnecessary warranty claims can be minimised by following these guidelines:

- After disconnection of any cables, carefully install appropriate dust caps to protect the mating faces of the connectors from damage or contamination.
- Avoid introducing tight bends (less than 30mm radius) or kinks into the fibre optic cable during service or repair. Tight bends or kinks could impair operation, cause immediate system failure, or future system failure.
- Avoid excessive force, strain or stress on the fibres and connectors, especially permanent stress after reinstallation.

TABLE OF CIRCUIT OPTION CODES

The following table contains a list of circuit (Cct) reference numbers against a description of the applicable model or option. This information should be used in conjunction with the connector pin-out tables to determine the wire configuration of the vehicle under test.

Cct	Model or Option
1	ABS
